Topics Discussed:

We discussed the theme of our project and how we are going to organize it over the coming weeks. Eventually came up with 2 main ideas: supply management app and a gym and health tracker app. We also discussed the tools and applications that we will use in the coming weeks.

Decisions Made: For any app the MERN stack (mongoDB, Express.js, React.js, Node.js) will be used. In the following weeks more research will be done to decide on more appropriate libraries for the application we will decide to build.

Tasks Assigned:

- Learn GIT, create a github account
- Install and configure node.js in your computer
- Decide on the product idea and name

Time, Place, and Agenda for Next Meeting: Thursday 20:00, online meet.google.com to discuss how we are going to structure the project and the backend infrastructure.
